About Company

The "Wielkopolanka" cooperative in Grodzisk Wielkopolski was founded on July 26, 1950 as a Sheltered Work Establishment.

The beginning of the activity is a multi-branch production in the field of wooden haberdashery, sewing protective clothing and metal processing.

The following years saw further development towards the production of polystyrene moldings, market products, construction joinery, production of printed circuit boards, voltage regulators for fiat 126, 125, Polonez cars, agricultural machines, diesel engines, regulatory autotransformers and cooperation in the field of electronic assembly.

Production is carried out in three plants, two are located in Grodzisk Wielkopolski, and the third in Bukowiec, which is 12 km away and is located on the route Grodzisk Wielkopolski - Nowy Tomyśl.

The 1990s saw a dynamic development of the production of expanded polystyrene moldings, mainly for packing household and electronic equipment. In this field, the Cooperative cooperated with the largest manufacturers of washing machines, cookers and ovens.

Currently, the main segment of the company's activity is construction joinery.

Our specialty is joinery: wooden windows, external and internal shutters, external and internal wooden doors, façade board, terrace board and parquet board.

We specialize in historical woodwork.

We make new windows in buildings entered in the register of monuments.

Our products meet conservation requirements.

In addition to making new carpentry products, we also renovate wooden windows and doors.

We carry out orders for both individuals and companies.

We are open to cooperation in the form of subcontracting.

We also offer our products with assembly service.

We operate throughout Poland, Germany and France.

WOODEN WINDOWS

Modern and functional wooden windows

Wooden windows are one of the most important elements that make the house stand out from other gray buildings. Wood is a material that has been used for centuries in the construction and decoration of houses. It is extremely decorative and has excellent performance properties. Wooden windows for the house blend in with any architectural style and interior design.

Durable and natural materials

The offered wooden windows are made of pine wood. On individual request, it is possible to use European oak or exotic meranti wood. This material is characterized by high hardness, is resistant to mechanical damage and changing weather conditions. As a result, the wooden window provides excellent acoustic and thermal insulation. In addition, the woodwork is protected against mold and fungus.

WOODEN WINDOWS

Comfort and safety

Structural elements of wooden windows are joined with finger joints, which guarantees high durability regardless of the size of the window. The surface is thoroughly impregnated and coated with TEKNOS three-layer water-based paint in various colors.

The coating does not emit harmful substances and is resistant to washing. It does not limit the breathing of wood, and at the same time effectively protects the material against the harmful effects of external factors. A wooden window protected in this way can be easily kept clean.

WOODEN DOORS

Order wooden interior doors tailored to your needs

As a manufacturer of doors, we guarantee that our products made of solid pine, oak and meranti wood will become a real decoration of your home. Importantly, you can choose a door designed by yourself, as long as the idea is approved by the technologist. It is worth considering the addition of glass with an ornament, you can also opt for milk glass or stained glass. Our offer includes wooden interior doors with a standard frame, as well as models with a channel frame.

We also accept orders for sliding doors on the Herkules rail.

We know that details are very important, which is why we decided to offer our customers a varied range of handles with different designs. Thanks to our efforts, wooden doors to the house can become a practical decoration of the place where you live every day!

Wooden doors from Wielkopolanka - construction of the leaf and frame

The basis of our doors is a frame with a width of 80 mm and a thickness of 68 mm or 78 mm. Each door leaf is also 68 mm thick. The door leaf claddings are based on 140 mm wide rails, from which we make the crossbars and the frame. Each door leaf is insulated with a layer of polystyrene board.

The doors made in this way are durable and durable, however, in the highly variable environmental conditions in our climate, we recommend roofing the doors to extend their life.

WOODEN SHUTTERS

Wooden shutters

When arranging a living space, one cannot ignore the appropriate finish of windows, which are an important element of the arrangement of each apartment. Currently, a number of different proposals are available on the market that are used for this type of application. Among them, wooden internal shutters deserve special attention, allowing the interior to receive the right amount of light and ensuring your privacy.

Internal shutters manufacturer Wielkopolanka

Wielkopolanka is a well-known and valued production company that provides its customers with high-quality joinery, which is successfully used in residential construction. The solutions we propose include: internal shutters, i.e. shutters. These are stylish and timeless shutters mounted inside, consisting of a series of horizontally arranged slats that can be moved to control the amount of sunlight that enters our home.

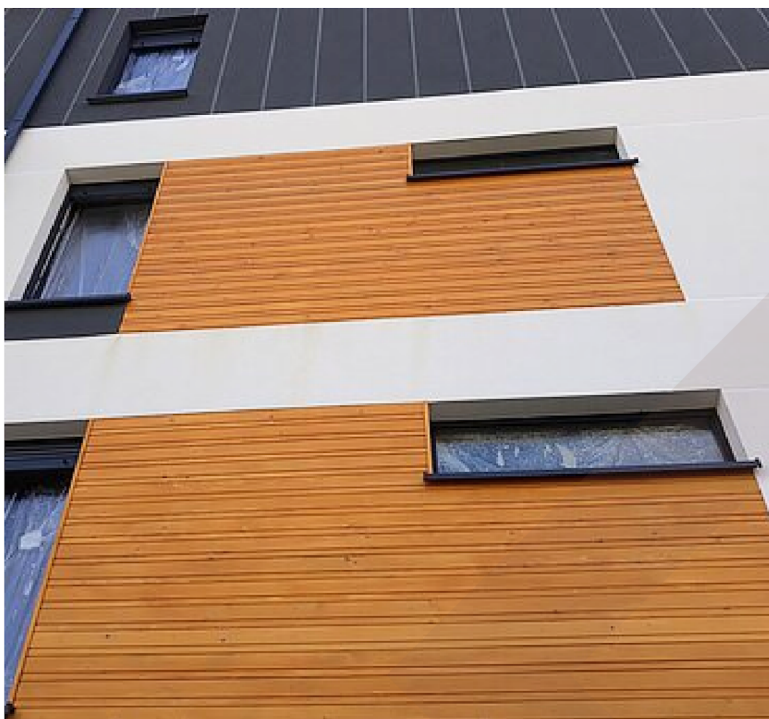

WOODEN FACADE

The wooden facade board is a product that allows you to combine classics with modernity. Thanks to their use, the facade of our house will be easy to maintain, and at the same time it will give our apartment a great look. Recently, houses in the classic style are experiencing a renaissance and more and more people decide on such a solution.

We have several types of facade boards made of different types of trees to choose from, so everyone will surely find the perfect product for themselves.

Each type of tree has something different. The different types of available facade boards have different colors, thanks to which we will be able to choose the perfect shade so that it matches the rest of the house and garden. However, all available tree species are very durable, so you don't have to worry about the durability of the product.

WOODEN TERRACE BOARD

Among the terrace boards offered by our company, you can find primarily high-quality products made of our native tree species. Their choice will give you a terrace floor characterized by high durability and beautiful appearance, and you will save money!

What types of boards do we offer?

Various wooden terrace boards available in our offer are primarily:

- Polish pine
- spruce
- Siberian larch

Cut to the right dimensions, terrace boards made of trees of these species will provide your terrace with the features you expect. Due to the fact that these trees are moderately resistant to weather conditions, we offer their deep impregnation with special agents, thanks to which they become resistant to pests, but also moisture or frost. Bright, subtle pine or spruce boards will allow you to get an interesting effect on the terrace - a modern, light parquet that will perfectly match contemporary garden furniture or elegant flower pots.

Why is it worth investing in Wielkopolanka terrace boards?

We specialize in the production of wooden products for various applications, including external ones. Therefore, each of our products is processed with the aim of protecting the wood as much as possible against external factors - UV radiation, moisture and frost. Thanks to this, the risk of fungus, mold or wood-eating pests developing in the wooden parquet is minimized. The board available in different widths will allow you to lay a beautiful parquet around the pool or on the terrace, so that you can take full advantage of the beautiful weather in spring and summer, spending a nice time in your garden.

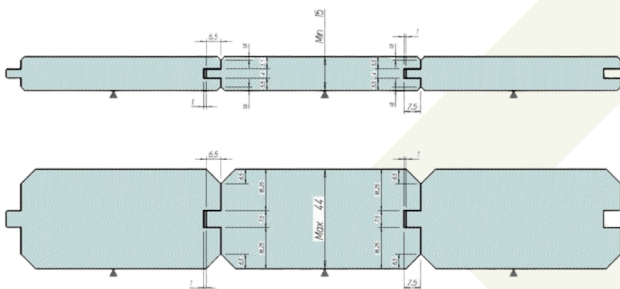

WOODEN PARQUET

Our parquet is made of high-class oak wood. The product we sell is already varnished and ready for installation.

BOARD DIMENSIONS

- Thickness 28mm
- Width 70mm
- Length 300mm

Our parquet is made in a rustic version with undercuts when connecting individual boards. The depth of the undercut varies depending on the thickness of the board.

WOODEN WALL PANELS

Wooden decorative elements can change any interior. Thanks to wooden wall panels, you will turn boring interiors into a HIT of the last season. Wood gives character and warms every room.

Do you want to tastefully divide the space of your apartment, and by the way, do you want it not to get "tight and dark"? Wooden slats are perfect for this.
